## Apache® Cervical Interbody System

The *Apache* Cervical Interbody System consists of precision instruments and PEEK Optima® implants for aiding in fusion of the cervical spine. The combination of PEEK Optima® and tantalum markers allows surgeons to have an enhanced view of implant placement during surgery and vertebral fusion post surgery.

- 
1. Tantalum markers
  2. Aggressive tooth pattern resists implant migration.
  3. Increased wall thickness for structural support
  4. Threaded inserter allows for quick capture and stable insertion.
  5. Large graft window
-
