FUSELOX[®]

LUMBAR CAGE

The FuseLOX Lumbar implant with a tapered leading edge and secure low profile inserter interface, delivers enhanced insertion control and ease of use. The superior and inferior ridges provide secure endplate stability, while the large graft window allows for a substantial scaffold of bone in-growth. A wide selection of lordotic and convex implant sizes with corresponding trials for ideal anatomical conformity. Each implant is purposely designed with control, reliability and performance in mind.
